INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.
PCT/EP2005/000717

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1-12	YES
	Claims		NO
Inventive step (IS)	Claims	1-12	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-12	YES
	Claims		NO

2. Citations and explanations (Rule 70.7)

1. This report makes reference to the following documents:

D1 = WO-A-03/011457
 D2 = US-A-6 242 633
 D3 = US-A-2001/0014647
 D4 = FR-A-2 830 530
 D5 = DE-A-100 46 025
 D6 = US-A-3 496 215

2. Claim 1 of the application relates to a method for producing adipodinitrile by hydrocyanation of 1,3-butadiene in which two consecutive hydrocyanations take place, characterized in that a catalyst from at least one of the method steps is transferred to the other method step. Steps (a) to (e) are cited and comprise the method.

3. The prior art does not contain a prior description of steps (b), (c) and (e). Therefore, claim 1 meets the requirements of PCT Article 33(2).

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.
PCT/EP2005/000717

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

4. One of the problems to be solved by the present application is that of providing an integrated method for producing adiponitrile by double hydrocyanation of 1,3-butadiene that enables the catalyst cycles of the two hydrocyanations to be connected during the production of adiponitrile. The solution is the method according to claim 1, in particular steps (b), (c), and (e), and the indication that the catalyst from at least one step is transferred to the other method step.
5. Although the prior art describes hydrocyanation methods, it never describes a method with all of the technical features of claim 1. The advantage of the method is that the same Ni(O) catalyst can be used in all of the method steps (with the addition of Lewis acid in the second hydrocyanation step), and the catalyst can be transferred to the other method step, even from method step (e) back to step (a). The cited prior art contains nothing relating to this procedure that could have led a person skilled in the art to the present method. Therefore the method according to claim 1 meets the requirements of PCT Article 33(3).
6. Claims 2-12 are dependent on claim 1 and therefore likewise meet the PCT requirements
